

COMMUNICATIONS TECHNOLOGIES, INC. MERGES WITH JT&T COMMUNICATIONS

BURTON, MI — December 14, 2010 — Communications Technologies, Inc., an industry leader in unified communications, announced today that the company has merged with JT&T Communications. Communications Technologies currently provides business communications technology to small to mid-sized companies throughout the Michigan marketplace. The merger will bring greater levels of service and an expanded offering of products and services to JT&T's existing customers. JT&T will now operate under the Communications Technologies name and all technical staff will become members of the Communications Technologies team.

"It was our objective to partner with an experienced technology organization with a strong reputation and a desire to improve business technology options for the companies they serve," said Jeff Allen, President of Communications Technologies. "By combining the strengths of the two organizations, customers will benefit from a broader array of products and services, including advanced VoIP solutions, IT networking, IT support, consultation and training."

JT&T's customers will receive a number of unique advantages not previously available. Communications Technologies' Partner Plans are a prime example. "Our Partner Plans allow us to truly act as our client's business

communications partner," commented Mr. Allen. "These plans will provide JT&T customers with a level of service and support that exceeds their expectations. Not only do these plans provide coverage for all service and equipment needs for a fixed cost, but they include priority queuing and scheduling, reduced labor rates, preventative maintenance programs and guarantees for response times and available parts. These unique partner plans are unmatched by any other vendor in our region and we're excited to offer them to JT&T's customers."

Additionally, Communication Technologies offers customers the Current Technology Assurance Plan (C-TAP), an innovative program that ensures the telecom and information systems of small to mid-sized companies remain current and incorporate the latest in value added solutions. C-TAP gives companies the ability to refresh or renew their phone equipment any time after 24 months with no change in payment. New equipment and applications are installed without labor charges as well. Technology can be added as required within a fixed cost that can be absorbed by an organization's operating budget. Essentially, C-TAP allows the continued implementation of new technology within a set budget.

"We believe technology should provide companies with a competitive advantage and improved operating efficiencies

that will positively impact their bottom line. Through our abundance of managed services offerings and support plans designed to lower the total cost of service and ownership, we will help JT&T's customers achieve their business objectives," added Allen.

ABOUT COMMUNICATIONS TECHNOLOGIES INCORPORATED

Communications Technologies, Inc. (CTI) is an independently, locally owned voice and data communications company serving Michigan businesses for over 20 years. CTI is a one-source solution for ordering dial tone and high-speed Internet, providing voice and data cabling, and installation and support of business telephone systems and computer networks. The company takes a consultative approach to its customers' needs and makes recommendations based on over 100 years of combined experience and expertise. CTI actively supports the community through its involvement with non-profit and other charitable organizations. CTI's goal is to add value, differentiate its services, and deliver strategic technologies with integrity and innovation resulting in the highest level of customer profitability, satisfaction and competition advantage.
